

08/1995

ABOUT ME

Software developer specialized in Automation and Agentic systems. I possess a strong technical foundation in building cohesive agentic systems and automating complex workflows using N8N and LangChain/LangGraph.

Passionate about transforming manual processes into scalable AI architectures, I combine hands-on experience in Python and TypeScript with a deep understanding of RAG/RAFT architectures.

I aspire to continue growing in a professional environment that encourages innovation and where I can contribute my enthusiasm, dedication and commitment.

Sergio Cuéllar Almagro

AI Automation Developer

EDUCATION

IES Aguadulce

CFS in Web Application Development | 2023 - 2026

IES Victoria-Kent

CFS in Diagnostic Imaging and Nuclear Medicine | 2015 - 2017

ADDITIONAL EDUCATION

The Valley Digital Business School

Intensive Training in Big Data and Machine Learning | 265h | 2023

EXPERIENCIA LABORAL

AI Automation Developer

Simply Trade IN / Weebu | November 2025 - March 2026

- Designed and implemented complex automated flows using N8N, integrating AI capabilities into operational pipelines.
- Engineered support agents implementing Retrieval-Augmented Generation (RAG) to encode domain expertise into reusable systems.
- Deployed and maintained semantic retrieval systems using Supabase and Postgres + pgvector.
- Integrated AI into several other business workflows (Conversational Sales Engine and Automated Social Media Content Generation).

Web App Developer (Backend / Agentic Systems)

BoosterPrompt (Startup) | June 2025 - March 2026

- Collaborated on development of agent systems using LangChain and LangGraph, focusing on orchestration based on tool usage.
- Managed end-to-end integration and deployment of agent systems with external platforms (WhatsApp via Meta API), ensuring reliability in real-world operations.
- Implemented advanced prompt engineering strategies to optimize agent reliability.

Web Developer & Data Analyst

Freelance | March 2023 - November 2025

- Web development and SEO/SEM optimisation. Business data analysis (sentiment analysis, KPIs) using Python (Pandas, NLTK) for decision-making.

TECHNICAL SKILLS

AI:

- N8N, RAG architecture, Model fine-tuning, Prompt Engineering, Multi-agentic systems, LangChain/LangGraph.

Development:

- Python, TypeScript, Node.js, React, Next.js, PHP (Laravel/Symfony).

Data & Databases:

- PostgreSQL (pgvector), Supabase, MySQL, SQL.

Tools:

- Cursor, Antigravity, Docker, OpenAI API, git.
